EDUCATION

Nottingham Trent University <i>Bachelor of Science in Software Engineering Penultimate year grade: 1st class / 3.7 GPA</i>	Nottingham – U.K. Sept. 2022 – June 2026
Northern Arizona University <i>International Study Diploma in Professional Studies</i>	Flagstaff, AZ – U.S. Aug. 2024 – May 2025
Nottingham College <i>UAL Level 3 Ext. Diploma in Creative Media Prod. and Tech. – Games Development</i>	Nottingham – U.K. Sept. 2020 – June 2022

EXPERIENCE

Lead Web Developer <i>Traigo Events WordPress, CSS</i>	Nottingham – U.K. Jan. 2024 – May 2024
- Led all team and development sessions, providing technical guidance to ensure timely milestone delivery - Researched and selected WordPress plugins; documented rationale and authored client-facing usage guides - Designed UX mock-ups in line with accessibility standards and brand guidelines - Built a custom “Add to Quote” feature, cutting client quote -response time by 30% and increasing engagement	

PROJECTS

Portfolio <i>Next JS, Tailwind CSS, TypeScript, Docker, Figma, Git, Cloudflare Tunnels, Postmark</i>	June 2024 – Present
- Integrated Postmark API to facilitate user inquiries via a form, enhancing communication efficiency - Leveraged server-side rendering for improved SEO and client-side performance - Secured contact form submission with Google’s reCAPTCHA v2 - Utilised Tailwind CSS to streamline development and reduce redundancy - Implemented Docker containerisation, simplifying the development to deployment workflow - Hosted locally and used Cloudflare Tunnels for secure access, increasing control and lowering costs	
Cinema Showtimes <i>React, Express JS, TypeScript, Docker, Git, Cloudflare Tunnels, Figma</i>	June 2024 - Present
- Developed a secure REST API with user auth and expiring sessions to safeguard movie scheduling data - Distributed functionality into components, improving code maintainability and readability - Streamlined data management and reduced re-renders by consolidating state values into single objects - Optimised backend data-fetching algorithm, decreasing load times by 66% on average - Implemented rate limiting and data caching to ensure fair usage of the parent API	
Evently <i>C#, ASP.NET Core, EF Core, SQLite, GCP, Postmark, Adobe XD, JQuery, Git</i>	May 2024
- Prototyped via GCP for database access, storage management, and API development - Safeguarded sensitive user actions behind email verification, facilitated via the Core Identity API - Utilised Razor Pages’ RenderSections to promote modular design, enhancing development flexibility - Crafted user roles, granting admins access to a specialised control panel to facilitate metadata changes - Implemented Razor Pages’ Layouts to ensure a consistent UI across the application	
Weather App <i>C++, Boost Testing, JetBrains YouTrack, Git</i>	May 2024
- Integrated 21 unit tests across 6 cases to validate core functionality, improving reliability and UX - Employed Agile development methodology, ensuring continuous reflection and improvement - Created detailed project plans with Gantt charts to manage timelines and milestones effectively - Modelled application architecture by designing use case, class, and sequence diagrams for clarity - Leveraged CurlCPP to obtain data from numerous Open-Meteo APIs	

TECHNICAL SKILLS

Languages: HTML, CSS, TypeScript, C#, .NET, SQL, Java, Kotlin, C++, Python
Frameworks: React, Next.js, Tailwind CSS, JQuery, React Native, Express.js, Boost Testing (C++)
Developer Tools: Docker, Git, Jenkins, Figma, Cloudflare, GCP, VS Code, Visual Studio, Android Studio
